

# FORDONSBOK

## Digital Vehicle Service History

---

### Product Overview & Sales Pitch

Fordonsbok is a free web-based app for digitally documenting and sharing vehicle service history. No app installation required — works directly in any browser on mobile, tablet, and desktop.

### The Problem We Solve

---

Every day, thousands of vehicles are sold across Europe. Buyers and sellers lack a simple, credible way to present and verify service history. Physical service books get lost, fade, or disappear entirely. Workshop invoices end up in a shoebox. The buyer takes a risk — the seller loses negotiating power.

Fordonsbok solves this with three simple steps:

- Document all services and repairs digitally, with photos and receipts
- Share the service book via QR code or link — no account required for the recipient
- Export as a professional PDF when selling

### Who Is It For?

---

<b>Primary</b> Private owners	<b>Niche</b> Car enthusiasts	<b>Secondary</b> Small businesses	<b>Potential</b> Vehicle dealers
----------------------------------	---------------------------------	--------------------------------------	-------------------------------------

The app is primarily aimed at private individuals who own one or more vehicles and want to keep their service history organised — whether it is a family car, motorcycle, motorhome, caravan, or classic vehicle.

### Features

---

	<b>Vehicle Register</b>	Register all your vehicles with photo, make, model, year and colour. Supports cars, motorcycles, motorhomes, caravans, boats and more.
---	-------------------------	--

	<b>Service History</b>	Add service entries with date, type, mileage, cost, workshop and receipt. Sorted automatically in chronological order.
	<b>Statistics</b>	Total service cost, cost per year as a bar chart, number of service occasions and most expensive service types per vehicle.
	<b>PDF Export</b>	Generate a professional document with vehicle info, statistics and full service history. Perfect for private sales.
	<b>QR Code</b>	Generate a unique QR code per vehicle that links directly to the service book. Scan and show — no login required for the recipient.
	<b>Share Link</b>	Share a time-limited link (30 days) to the service book. The recipient needs no account.
	<b>Transfer / Sale</b>	Sell or transfer the vehicle digitally. The service history is permanently locked and can be transferred to the new owner within the system.
	<b>Multi-language</b>	Swedish and English. Currency is set independently of language — SEK, EUR, GBP, USD and more.
	<b>Mobile Ready</b>	Works on iOS and Android directly in the browser. Built-in camera support for receipt photos.

## Technology Stack

Built with modern web technologies and no dependency on frontend frameworks — easy to maintain and scale.

<b>Frontend</b>	Vanilla JS (ES Modules), HTML5, CSS3
<b>Database &amp; Auth</b>	Google Firebase (Firestore + Authentication + Storage)
<b>Hosting</b>	Cloudflare Pages (global CDN, automatic HTTPS)
<b>Charts</b>	Chart.js 4.4
<b>QR Generation</b>	qrcode.js (client-side, no server required)

## Business Model & Opportunities

The app is currently free and building a user base. Potential revenue streams going forward:

- Freemium — free for up to X vehicles, premium for unlimited + advanced features
- B2B — licensing to car dealers, leasing companies, workshop chains
- Integration — API connections to marketplaces such as Blocket, Bytbil, Wayke, or international equivalents

- White label — the app adapted with a partner's branding

## Roadmap

---

Now	Vehicle register, service history, statistics, PDF export, QR code, share link, transfer / sale, multi-language & multi-currency
Near term	Service reminders, sorting & search, duplicate service entry, co-ownership of vehicles
Long term	B2B integrations, native mobile app, marketplace API, premium tier

## Try It Yourself
